PROFILE

- Frontend Web Developer with 3 years of experience.
- I am skilled in core web technologies that is used to create, manage and host industry-standard websites which simplifies the complexities of businesses and services while enabling the best user experience and conforming to modern day user interface designs.

PROFESSIONAL WORK EXPERIENCE

1st DY Tech LTD
Front-End Engineer (Lead)

March 2022 – Present

- I am developing the company website using REACT-JS and TAILWINDCSS.
- I have been able to link the various pages of the website [Home, About, Product, Account and Login/Register] together using Route/Link form the "React-Router-DOM".
- I have been able to display products by connecting to the company's API weblink which contains data that will be utilized on the website.
- I have been creating reusable components, managing the state of deeply nested components using Redux while maintaining the DRY - Don't Repeat Yourself codebase methodology.
- I have been able to create a functioning Register/Login page whereby customers account will be authenticated using Google's Firebase Firestore.
- Using Tailwind CSS framework, I am developing the frontend of the website through a mobile-first responsive approach and this is increasing my productivity by 50%.

StargirlWorld
Web Developer/Web Designer

February 2021 – January 2022

- I designed a business website for the division of the company that produces fashion Bags and Shoes using Adobe XD.
- I wrote the code for the website ground-up using HTML, CSS and VANILLA JAVASCRIPT.
- I combined CSS Animations and Javascript DOM manipulation to display products at specified intervals of seconds.
- I was able to enable customers chat directly with the business manager when they click on the bouncing WhatsApp icon.
- I was able to create product section whereby customers can view a chosen product category or view all products.
- I was able to write well-structured and elegant code that made the website 100% pixel-perfect to the design mockup and the website is responsive to all devices. This has helped customers to access all the website sections on their devices.

Topmost Wears
Web Designer/WordPress

November 2019 – December2020

- I created an e-commerce store using WordPress WooCommerce theme.
- I used my knowledge of HTML/CSS to customize the design of the online store based on the client's specifications.
- I added Paystack payment gateway to the store which thereby enables customers to make secure payments for products directly on their devices.
- I designed a customer-friendly layout for the store so that customers can easily search or filter through products based on the price range, product-availability and customers past choices.
- I was able to stop online spammers that were attacking the online store by utilizing an industry standard antispam tool.

CORE SKILLS

- Frontend Language: Javascript
- Web Technologies: HTML, CSS – Flexbox and Grid, SCSS/SASS, Tailwind CSS
- Web Framework: React-JS
- Tools/Software Platforms: Git and Github, Firebase Netlify.

SOFT SKILLS

- Effective Communication
- Teamwork
- Time Management
- Problem Solving
- Open-mindedness

PERSONAL PROJECTS

- I created an online computer-based-test webapp that can be used by educational institutions for students or used by organizations for conducting online test built mainly with Javascript. Features of the webapp include: Login, Timer, Subjects, Questions, Alert Modals and a Result Section. Scores are updated to make sure no errors occur in calculation user scores.

- I designed and developed a landing page for a home-decorating company using HTML and Tailwind CSS. The website is fully responsive and takes a mobile first approach.

- I cloned Netflix website twice. The first one was developed using HTML/CSS/JAVSSCRIPT. The second one was created mainly using React-JS. The Netflix-React-App has an account page whereby users can select their favorite movies and it will be stored in the Firebase Database that I setup with the webapp. The users can login/register using Firebase Firestore.

- I have created several other projects where I have utilized the following: API, DOM manipulation, CSS animations, Asynchronous/Synchronous codes, Axios and Fetch among others that can be found on my portfolio website.
